RESTful APIs for Elements 3.0.x

Your instance of Elements provides its own built-in documentation generated by Swagger and will always report the most accurate version based on what you are currently running. This is available to view at /doc/swagger. When running Community Edition locally, you may always find the latest at the following URL http://localhost:8080/doc/swagger/.

For the Elements Core APIs, enter http://localhost:8080/api/rest/openapi.json into the explore bar.
